

AI & ML INTERNSHIP

NAME : K R LAHARI

Task 2: Exploratory Data Analysis (EDA)

Objective: Understand data using statistics and visualizations.

Tools: Pandas, Matplotlib, Seaborn, Plotly

CODE:

```
import pandas as pd
import seaborn as sns
import matplotlib.pyplot as plt

# Load the dataset
data = pd.read_csv('Titanic-Dataset.csv')

# 1. Generate summary statistics
print("Summary Statistics:")
print(data.describe())
print("\nMedian values:")
print(data.median(numeric_only=True))

# 2. Create histograms and boxplots for numeric features
numeric_cols = data.select_dtypes(include=['int64', 'float64']).columns

for col in numeric_cols:
    # Histogram
    plt.figure(figsize=(5, 3))
    plt.hist(data[col], bins=20, color='lightblue', edgecolor='black')
```

```
plt.title(f'Histogram of {col}')  
plt.xlabel(col)  
plt.ylabel('Frequency')  
plt.tight_layout()  
plt.show()
```

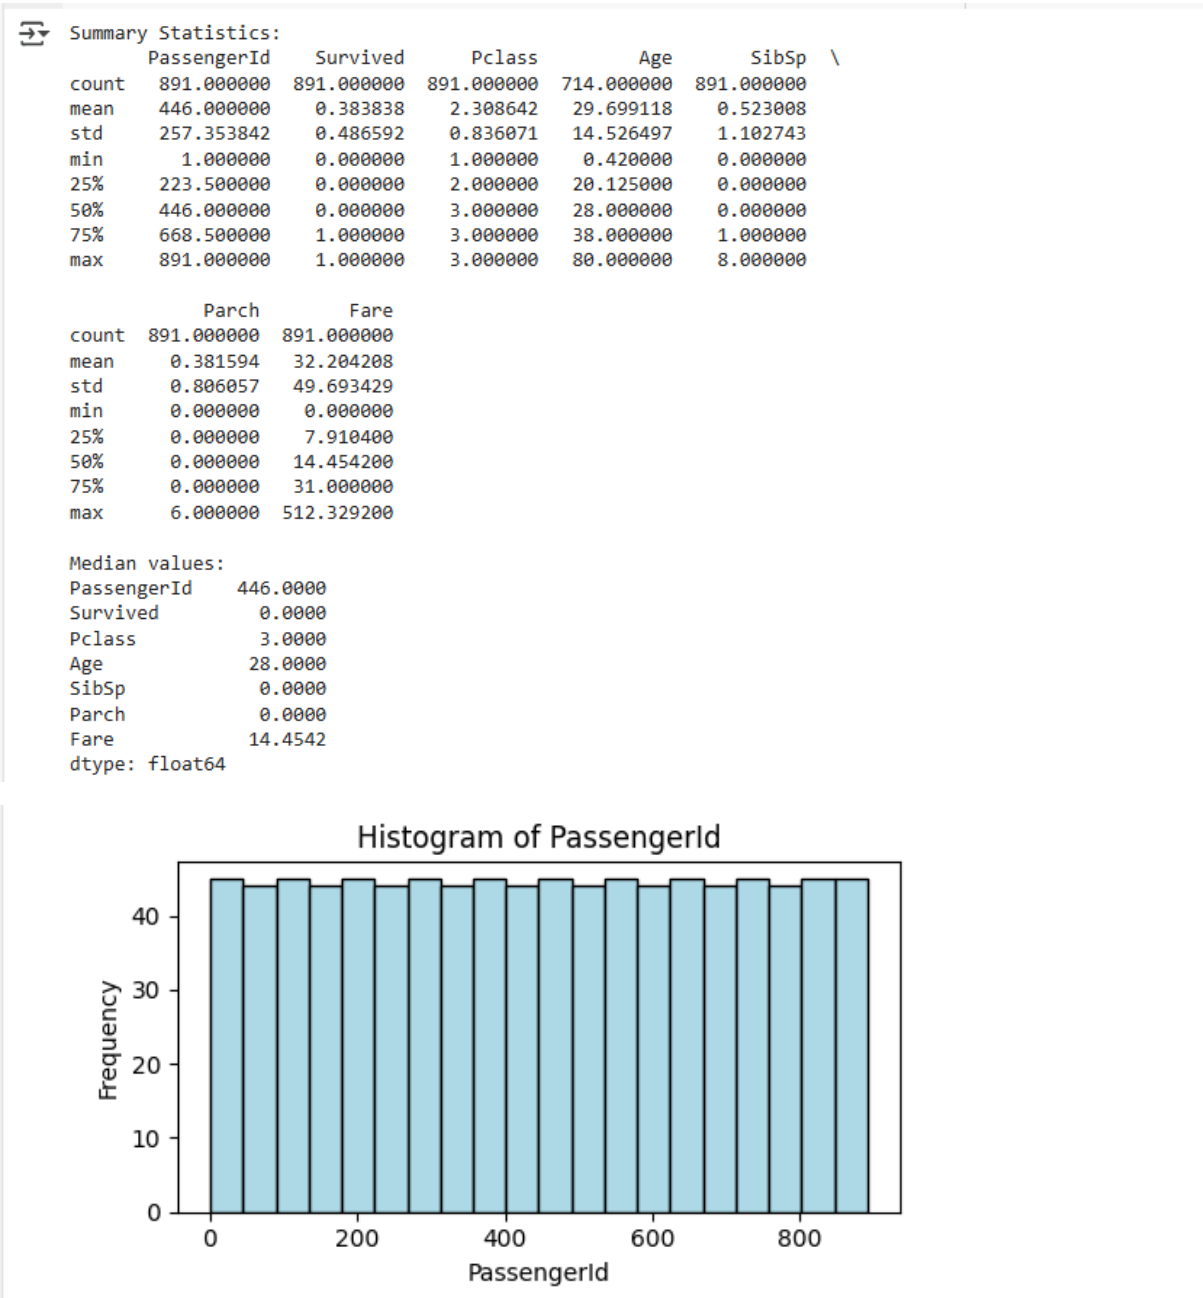

```
# Boxplot  
plt.figure(figsize=(5, 2))  
sns.boxplot(x=data[col], color='lightgreen')  
plt.title(f'Boxplot of {col}')  
plt.tight_layout()  
plt.show()
```

3. Pairplot and correlation matrix

```
# Pairplot  
sns.pairplot(data[numeric_cols])  
plt.suptitle("Pairplot of Numeric Features", y=1.02)  
plt.show()
```

```
# Correlation matrix  
plt.figure(figsize=(10, 6))  
sns.heatmap(data[numeric_cols].corr(), annot=True, cmap='coolwarm', fmt=".2f")  
plt.title("Correlation Matrix")  
plt.show()
```

OUTPUT:

Boxplot of Pclass

Histogram of Age

Boxplot of Age

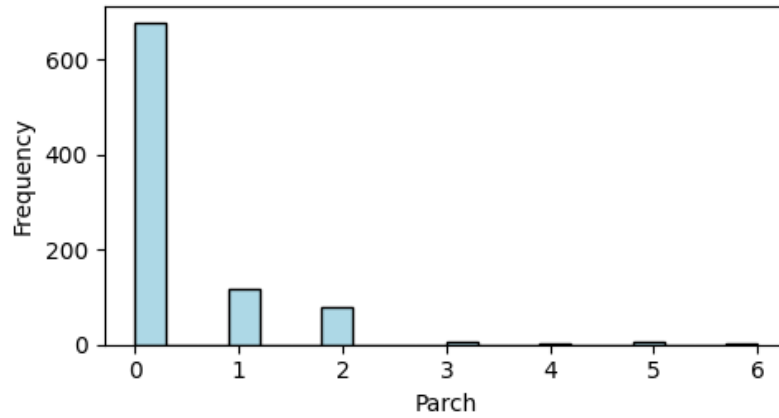

Histogram of SibSp

Boxplot of SibSp

Histogram of Parch

Boxplot of Parch

Histogram of Fare

Boxplot of Fare

Pairplot of Numeric Features
